

YOU asked for it.

OM/MM AUDIO IS NOW AVAILABLE FOR THE ATC-610s.

ATC new Outer Marker-Middle Marker Audio Accessory provides the simulator pilot with Coded Audio sounds to reinforce the visual lights of the Marker Beacon Receiver.

There is nothing to program just turn the Marker Beacon Receiver on and as the simulator flies over an Outer Marker, a low pitch continuous series of Morse Code dashes sound. Over the Middle Marker a medium pitched continuous series of alternating dots and dashes confirms your arrival.

Decrease your scan load and let your ears tell your position. Your OM/MM Audio Kit is available for installation on your present simulator or can be ordered for factory installation on your new ATC-610.
